Scalability Roadmap & Limitations

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Flask single thread development server	Deploy with Gunicorn WSGI server behind an Nginx load balancer.
2	Data Storage	Pickled model serialization, local CSV exports	Migrate to relational databases (PostgreSQL) for user histories.
3	Performance	In-memory model evaluation inside Flask	Offload batch evaluations to celery workers or Redis queues.
4	Security & Auth	Open form queries with no user login validations	Integrate JWT (JSON Web Tokens) or OAuth2 user access levels.
