

Functional Features Overview

|           |              |              |                    |
|-----------|--------------|--------------|--------------------|
| Date      | 06 July 2026 | Project Name | Smart Lender       |
| Team Lead | Alla Umesh   | Team Members | DSP, JRJ, LPB, SVB |

Functional Features Implementation Checklist

| S.No | Feature Name               | Description                                              | Component             | Status      |
|------|----------------------------|----------------------------------------------------------|-----------------------|-------------|
| 1    | Single Applicant Evaluator | Interactive web form calculating instant approval status | app.py / predict.html | Implemented |
| 2    | Batch Uploader Queue       | Asynchronous CSV uploader evaluating multiple entries    | app.py / predict.html | Implemented |
| 3    | Automated Risk Flags       | Identifies low income, poor credit, high debt ratios     | app.py / submit.html  | Implemented |
| 4    | Metrics Dashboard          | Displays testing and training accuracy comparison        | app.py / home.html    | Implemented |
| 5    | Batch CSV Download link    | Downloads evaluated applicant results as CSV             | Implemented           | Yes         |

Feature Breakdown Breakdown

| UI Features                   | Backend Logic Features                 | ML / Modeling Features            |
|-------------------------------|----------------------------------------|-----------------------------------|
| Dual-tab view (form / upload) | Missing value imputation (Mode/Median) | SMOTE Class Balancing             |
| Drag-and-drop CSV box         | Outlier log-transformation             | StandardScaler normalization      |
| Dynamic scoring badges        | Risk thresholds evaluations            | XGBoost Classifier classification |
